

WATF -- EURO Working Group On Automated TimeTabling

27-29 Aug 2013

MISTA 2013 PROCEEDINGS

6th Multidisciplinary International Scheduling Conference: Theory & Applications, Gent, Belgium, 27-29 Aug 2013

MISTA 2013

Proceedings of the

6th Multidisciplinary International Conference on Scheduling: Theory and Applications

27th – 29th August 2013
Gent, Belgium

Edited by

Graham Kendall, University of Nottingham, UK

Greet Vanden Berghe, KAHO – KU Leuven, Belgium

Barry McCollum, Queens University Belfast, UK

Table of Contents

Plenary Presentations

Della Croce F. <i>LP, or not LP: that is the question</i>	013
Potts C. <i>Planning and Scheduling for Railways: Review and Case Studies</i>	014
Witteveen C. <i>Decomposition in scheduling</i>	015

Papers

Sioud A., Gravel M. and Gagné C. <i>A new ant colony optimization for minimizing tardiness in the single machine scheduling problem with sequence-dependent setups times</i>	017
Messelis T., De Causmaecker P. and Vanden Berghe G. <i>Algorithm performance prediction for nurse rostering</i>	021
Quilliot A. and Chrétienne P. <i>Homogeneously non-idling schedules of unit-time jobs on identical machines</i>	039
Adasme P. and Lissner A., Wang C. and Soto I. <i>Scheduling in Wireless OFDMA-TDMA Networks using Variable Neighborhood Search MetaHeuristic</i>	055
Nishi T. and Sugiyama T. <i>Bilevel Decomposition Approach for Cyclic Staff Scheduling Problems</i>	065
Berlinska J. and Drozdowski M. <i>Mitigating Partitioning Skew in MapReduce Computations ...</i>	080
Quilliot A. and Toussaint H. <i>RCPSP with Resource Transfers and Money Management</i>	091
Moura A. and Oliveira J. <i>Container Stowage and Short Sea Ship Routing Problem Optimization</i>	111
Briand C., Ngueveu S.U. and Sucha P. <i>Solving a cooperative project scheduling with controllable processing times, self-interested agents and equal profit sharing</i>	125
Agnetis A., Aloulou M.A. and Fu L-L. <i>Production and Inbound Batch Delivery Scheduling: Dominance and Cooperation</i>	133
Fernandes P., Pereira C.S. and Barbosa A. <i>Automatic timetabling in Higher Education Institutions: a real scenario and solution</i>	151
Tanaka S. <i>The single-machine scheduling problem with a finite capacity input buffer</i>	171
Deleplanque S. and Quilliot A. <i>Transfers in the on-demand transportation: the DARPT - Dial-a-Ride Problem with transfers allowed</i>	185
Jeauneau V. and Chrétienne P. <i>Mimizing the number of late jobs on parallel machines with alpha time windows</i>	206

Dostert M., Politz A. and Schmitz H. <i>Algorithms and Complexity of Student Sectioning for Existing Timetables</i>	218
Zeltzer L., Limère V. and Aghezzaf El-H <i>Balancing and Sequencing Mixed-Model Assembly Lines to Minimize Work Overload in Real World Workstations</i>	230
Benmansour R., Allaoui H., Artiba H. and Hanafi S. <i>Minimizing the weighted sum of maximum earliness- tardiness cost on a single machine under maintenance constraints</i>	240
Müller T. <i>Real-life Examination Timetabling</i>	248
Seddik Y., Gonzales C. and Kedad-Sidhoum S. <i>A polynomial time OPT-1 algorithm for a scheduling problem with two delivery dates and cumulative payoffs</i>	268
Gafarov E.R., Dolgui A., Lazarev A.A. and Werner F. <i>A Graphical Algorithm for Solving an Investment Optimization Problem</i>	290
Muehlenthaler M. and Wanka R. <i>A Decomposition of the Max-min Fair Curriculum-based Course Timetabling Problem: The Impact of Solving Subproblems to Optimality</i>	300
Bellio R., Ceschia S., Di Gaspero L., Schaerf A. and Urli T. <i>A simulated annealing approach to the curriculum-based course timetabling problem</i>	314
Geirsson E. and Runarsson T.P. <i>Bandit Algorithms using Monte Carlo Rollouts for Job Shop Scheduling</i>	318
Fonseca G.H.G., Santos H.G. and Toffolo T.A.M. <i>Late Acceptance-Hill Climbing Applied to the High School Timetabling Problem</i>	331
Fonseca G.H.G. and Santos H.G. <i>A New Integer Linear Programming Formulation to the Examination Timetabling Problem</i>	345
Pira C. and Artigues C. <i>Line search method for solving a non-preemptive strictly periodic scheduling problem</i>	356
Demir O. and Özdamar L. <i>A GIS-Based Emergency Response System for Disaster Relief Operations</i>	372
Laborie P. and Rogerie J. <i>Temporal Linear Relaxation in IBM ILOG CP Optimizer</i>	379
Valouxis C., Gogos C., Alefragis P., Goulas G., Voros N. and Housos E. <i>DAG Scheduling using Integer Programming in heterogeneous parallel execution environments</i>	392
Van Vreckem B., Borodin D., De Bruyn W. and Nowé A. <i>A Reinforcement Learning Approach to Solving Hybrid Flexible Flowline Scheduling Problems</i>	402
Martínez Y., Nowé A. and Bello R. <i>A Robust Multi-Agent Reinforcement Learning Approach for Scheduling Problems</i>	410
Komarudin, De Feyter T., Guerry M-A. and Vanden Berghe G. <i>Extended Roster Quality Staffing Problem: A medium term roster quality to support staffing decisions</i>	424
Scholz-Reiter B., Tan Y. and Hildebrandt T. <i>A computational study of shifting bottleneck procedures for job shop total weighted tardiness scheduling problems</i>	437

Rodrigues L.U., Santos H.G., Toffolo T.A.M. and Silva C.L.T.F. <i>Local search techniques applied to the Unrelated Parallel Machine Scheduling Problem with Sequence Dependent Setup Time</i>	458
Pineda A.A.S., Pecero J.E., Huacuja H.J.F., Barbosa J.J.G. and Bouvry P. <i>An Iterative Local Search Algorithm for Scheduling Precedence-Constrained Applications on Heterogeneous Machines</i>	472
Bucar D., Bessler S., Musliu N. and Groenbaek J. <i>Scheduling of electric vehicle charging operations</i>	486
Hamilton-Bryce R., McMullan P. and McCollum B. <i>Directing selection within an extended great deluge optimization algorithm</i>	499
Creemers S., Colen P. and Lambrecht M. <i>Evaluation of appointment scheduling rules</i>	509
Valero-Herrero M., Garcia-Sabater J.P. and Vidal-Carreras P.I. <i>In-depth analysis of the quality sequence to resolve CRSP</i>	515
Rahman S.A., Bargiela A., Burke E., McCollum B. and Özcan E. <i>An Investigation of Multistage Approaches to Examination Timetabling</i>	528
Weng F.C., bin Asmuni H. and McCollum B. <i>Tackling University Timetabling Problems Using Hybridization of Swarm Based Approach</i>	543
Sabar N.R., Ayob M. and Kendall G. <i>A Hybrid of Differential Evolution and Simulated Annealing Algorithms for the Capacitated Arc Routing Problems</i>	549
Klos T., Wilson M. and Witteveen C. <i>Flexibility Metrics for Time and Resource Constrained Scheduling Problems</i>	555

Abstracts

Nakamura S., Chen M. and Nakayama K. <i>Optimal Parallel Systems for Random Scheduling Times</i>	573
Kellerer H. and Strusevich V. <i>Fast Approximation Schemes for Boolean Programming and Scheduling Problems Related to Positive Convex Half-Product</i>	577
Van den Bergh J., Beliën J., Leus R. and Nobibon F.T. <i>A resource loading problem in the aircraft line maintenance industry</i>	580
Ermis G. and Oguz C. <i>Scheduling chains with constant timelags and variable release times on a single machine</i>	584
Bocquillon R. and Jouglet A. <i>Minimizing the dissemination length in the one-datum-unit data transfer problem</i>	587
Lapègue T., Bellenguez-Morineau O. and Prot D. <i>A large neighborhood search for the Shift Design Personnel Task Scheduling Problem with Equity</i>	590

Cheng C., He R., Yao F. and Yang Z. <i>Order acceptance and scheduling problem with time-dependent revenues</i>	593
Goossens D. and Spieksma F.C.R. <i>Scheduling round robin tournaments for amateur sport leagues</i>	596
Barth T.C., Böckmann F. and Schäfer A. <i>Baggage Scheduling at Airports: A framework for efficiently allocating resources to flight events</i>	599
Berghman L., Spieksma F.C.R. and T'Kindt V. <i>Solving a time-indexed formulation by preprocessing and cutting planes</i>	603
Curran D., Van der Krogt R., Little J. and Wilson N. <i>Compilation of Maintenance Schedules based on their Key Performance Indicators for Fast Iterative Interaction</i>	606
Amrouche K. and Boudhar M. <i>Reentrance and exact time lag on flow shop scheduling problem</i>	610
Kuhpfahl J. and Bierwirth C. <i>A GRASP approach for the Job Shop Scheduling Problem with minimizing the Total Weighted Tardiness</i>	613
Loeff J., Ackermann H. and Küfer K-H. <i>Time-Hierarchical Scheduling: A worst-case analysis of a rolling hierarchical approach for integrated production planning and scheduling in make-to-order environments</i>	617
Cerdeira J.O., Lopes I.C. and Costa e Silva E. <i>Optimal scheduling of aircrafts' engines repair process</i>	620
Wei W., Nobibon F.T. and Leus R. <i>Optimal scheduling policies for diagnosing k-out-of-n systems with imperfect tests</i>	624
Kristiansen S., Mason A. and Stidsen T.R. <i>Student Sectioning at High Schools in Denmark</i>	628
De Bruecker P., Demeulemeester E., Beliën J. and Van den Bergh J. <i>Algorithms for building optimal aircraft maintenance personnel rosters</i>	633
Gafarov E.R., Dolgui A. and Lazarev A.A. <i>Solution Algorithms for the Two-station Single Track Railway Scheduling Problem</i>	636
Sabar N.R. and Nazri M.Z.A <i>An Iterated Local Search Algorithm for the Technician Routing and Scheduling Problem</i>	641
Ceschia S. and Schaerf A. <i>The Dynamic Patient Admission Scheduling with Operating Room Constraints, Flexible Horizon, and Patient Delays</i>	646
Lancia G. and Serafini P. <i>Scheduling teams for aircraft ground maintenance</i>	649
Vancroonenburg W. and Wauters T. <i>Extending the late acceptance metaheuristic for multi-objective optimization</i>	652
Davari M., Demeulemeester E., Leus R. and Nobibon F.T. <i>Exact algorithms for single-machine scheduling with time windows and precedence constraints</i>	656

Vansteewegen P. and Mateo M. <i>An efficient metaheuristic for the inventory orienteering problem and the single-vehicle cyclic inventory routing problem</i>	659
Smet P. and Vanden Berghe G. <i>A heuristic approach to an integrated personnel rostering and task assignment problem</i>	664
Blazewicz J., Bouvry P., Musial J., Pecero J.E. and Trystram D. <i>Dual Discounting Functions for Internet Shopping Optimization Problem</i>	667
Coolen K., Leus R. and Nobibon F.T. <i>Complexity analysis of the discrete sequential search problem with group activities</i>	670
Maenhout B. and Vanhoucke M. <i>An exact procedure for an integrated project staffing problem</i>	673
Verbeeck C., Aghezzaf E.-H and Vansteewegen P. <i>A fast solution method for the Time-Dependent Orienteering Problem with time windows</i>	676
Deghdak K., T'Kindt V. and Bouquard J-L. <i>Evacuation Scheduling of a Town after a Natural Disaster: Time-indexed Formulations</i>	680
Ingels J. and Maenhout B. <i>The Impact of Problem Characteristics on the Robustness of a Personnel Schedule: An Empirical Investigation</i>	684
Dauzère-Pérès S. and Moench L. <i>New MILP Formulations for Minimizing the Number of Tardy Jobs on a Single Batch Machine</i>	687
Bykov Y. and Petrovic S. <i>An initial study of a novel Step Counting Hill Climbing heuristic applied to timetabling problems</i>	691
Hernández J.J.G., García M.J.G. and Hernández J.G.R. <i>Use Matrixes Of Weighing for the scheduling in a sports Fantasy</i>	694
Garraffa M., Salassa F., Vancroonenburg W., Vanden Berghe G. and Wauters T. <i>A computational study of a cutting stock problem with sequence dependent cut losses</i>	703
Guedes A.F.M., and Tereso A.P. <i>Scheduling with MS Project: an add-in</i>	707
Walcarius T., Houbraken M., Audenaert P., Pickavet M. and Demeester P. <i>Modeling Real-World Vehicle Routing Problems with Dependencies</i>	711
Walker S. and Zinder Y. <i>New Solvable Cases of the Maximum Lateness Problem with Preemptions</i>	714
Bitar A., Dauzère-Pérès S. and Yugma C. <i>An unrelated parallel machine scheduling problem with auxiliary resources and sequence dependent setup times</i>	718
Hanzalek Z. and Hanen C. <i>Grouping tasks to save energy in a cyclic wireless sensor network scheduling problem</i>	721
Mihaylov M., Wauters T. and Vanden Berghe G. <i>A 3-phase approach to geographically distributed exam timetabling</i>	725

Sahin G. and Saridarq F.D. <i>The Balanced Path Problem in Crew Scheduling Applications</i>	729
Han J., Sadykov R. and Vanderbeck F. <i>Parallel Machine Scheduling with Generalized Precedence Relations</i>	733
Beliën J. and Mercy A. <i>Building university course timetables with minimized resulting student flows: A case study at the Hogeschool-Universiteit Brussel</i>	737
Dauzère-Pérès S., Shen L. and Neufeld J.S. <i>Solving the Hybrid Job Shop Problem with Sequence Dependent Setups</i>	741
Vaclavik R., Sucha P. and Hanzalek Z. <i>Roster Evaluation Based on the Classifiers for the Nurse Rostering Problem</i>	744
Cortés R., Molina P. and Garcia-Sabater J.P. <i>On the effect of complexity and uncertainty in ELSP</i>	748
Lykourantzou I., Aggoune-Mtalaa W., Vergados D.J. and Naudet Y. <i>Guiding wiki crowds through resource scheduling</i>	753
Hazir O. and Kedad-Sidhoum S. <i>Batch Sizing and Just-In-Time Scheduling: Analysis of Some Special Cases</i>	757
Kochaniková B. and Rudová H. <i>Student Scheduling for Bachelor State Examinations</i>	762
Clark M.D. and Parkes A.J. <i>Heuristic Pruning Methods For The Robust Shortest Path Problem</i>	767
Elhag A. and Özcan E. <i>A Grouping Hyper-heuristic for Graph Colouring</i>	770
Lamas P. and Demeulemeester E. <i>The stochastic resource-constrained project scheduling problem under different confidence levels</i>	774
Muklason A., Parkes A.J., McCollum B. and Özcan E. <i>Initial Results on Fairness in Examination Timetabling</i>	777
Earl M. <i>Innovative teaching and the death of the utilisation survey</i>	781
Christiaens J., Wauters T., De Wispelaere A. and Vanden Berghe G. <i>A heuristic approach to the prisoner transportation problem</i>	786
Brauner N., Finke G., Shafransky Y. and Sledne D. <i>Two extensions of Lawler's min-max cost algorithm</i>	790
Turky A.M., Abdullah S., McCollum B. and Sabar N.R. <i>An Evolutionary Hill Climbing Algorithm for Dynamic Optimisation Problems</i>	795
Aharon G. <i>Hierarchical Control Model for Several Stochastic Network Projects</i>	800

MISTA 2013 Challenge: Finalists

Schnell A. <i>A hybrid local search algorithm integrating an exact CP-SAT approach to solve the multi-mode resource-constrained multi-project scheduling problem</i>	802
Geiger M.J. <i>Iterated Variable Neighborhood Search for the resource constrained multi-mode multi-project scheduling problem</i>	807
Alonso-Pecina F., Pecero J.E. and Romero D. <i>A Three-Phases Based Algorithm for the Multi-Mode Resource-Constrained Multi-Project Scheduling Problem</i>	812
Artigues C. and Hebrard E. <i>MIP Relaxation and Large Neighborhood Search for a Multi-Mode Resource-Constrained Multi-Project Scheduling Problem</i>	815
López-Ibáñez M., Mascia F., Marmion M-E. and Stützle T. <i>Automatic Design of a Hybrid Iterated Local Search for the Multi-Mode Resource-Constrained Multi-Project Scheduling Problem</i>	820
Borba L.M., Benavides A.J., Zubaran T., Carniel G.C. and Ritt M. <i>A simple stochastic local search for multi-mode resource-constrained multi-project scheduling</i>	826
Bouly H., Dang D-C., Moukrim A. and Xu H. <i>Evolutionary algorithm and post-processing to minimize the total delay in multi-project scheduling</i>	831
Asta S., Karapetyan D., Kheiri A., Özcan E. and Parkes A.J. <i>Combining Monte-Carlo and Hyper-heuristic methods for the Multi-mode Resource-constrained Multi-project Scheduling Problem</i>	836
Toffolo T.A.M., Santos H.G., Carvalho M. and Soares J. <i>An Integer Programming Approach for the Multi-Mode Resource-Constrained Multi-Project Scheduling Problem</i>	840

Plenary Papers

Della Croce F. <i>LP, or not LP: that is the question</i>	849
